Flower Novelties for 1954

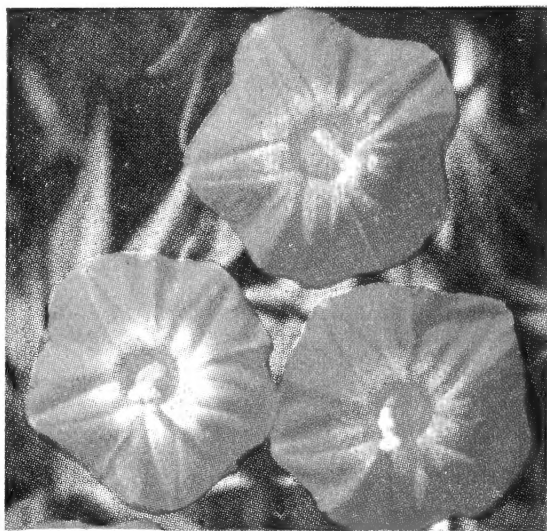

PETUNIA LIPSTICK

A rich new color. The plants are covered with medium-sized single flowers of a rich carmine rose with a suggestion of salmon. Especially valuable in locations where other varieties are inclined to fade because of intense sun. A neat, tidy, dwarf bedding petunia. Lipstick Petunia is deep enough to be colorfast, yet bright enough for brilliant effects in the home and garden. Compact plants are 12 to 14 inches high covered with 2½-inch flowers all summer long. **Pkt. 25c; 2 Pkts. 45c.**

HEARTS AND HONEY VINE—Changes Color 3 Times Daily

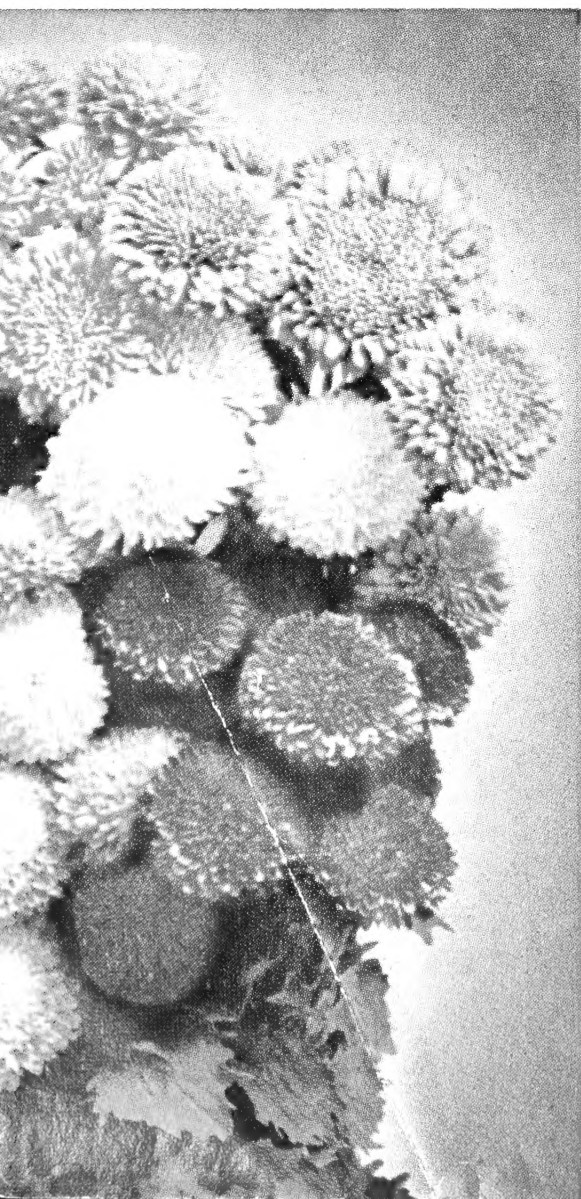

Hearts and Honey Vine is a novelty flower "touched with magic," one of the most colorful and unusual flowers ever offered. Hearts and Honey is one of the easiest to grow of all annual climbing vines. It produces beautiful foliage, deeply cut like the leaf of a fern. It starts flowering seven weeks after the seed is sown and is the most continuous flowering of all annuals, with masses of bright bloom until frost. Flowers are borne in such an abundance that they sometimes completely cover the plant. It changes color in the early morning the flowers are a brilliant orange with yellow center. Towards noon, a pinkish red with lighter center and in late afternoon, a clear bright shade of rose pink with white center. This novelty is one of the most interesting of all. **Grows 15 feet in length. Pkt. 25c, 2 Pkts. 45c.**

NEW TYPE ZINNIA

PEPPERMINT STICK (Candy Striped)

Zinnia Peppermint Stick Mixed is the most unusual Zinnia you have ever seen! The 24-inch high plants bear a multitude of cutflowers 3 inches in diameter which cut and come again all season and each flower is gaily striped in a combination of two or more colors. Every plant is different with combinations of red and white, red and yellow, orange and yellow, carmine and white, and purple and white; some barely flecked with colors and others half and half. About 70% striped but even the solid colors are wonderful for home decorating. **Pkt. (50 Seeds) 25c; 2 Pkts. 45c.**

ASTER POWDERPUFF

Imagine a ribbon of pink, azure, rose, crimson, white, scarlet, and blue so solidly made of 3 to 3½ inches of fully double flowers that the foliage literally cannot be seen! That's what you'll get with the new Powderpuff Aster which yields more color per square foot of garden space than any Aster you've ever grown. Each plant is 24 inches high, yet takes less than 12 inches of space—all the flowers are **on top**—as many as 20 long-stemmed cutflowers per plant. Almost half the flowers can be picked from each plant without harming the mass display in your garden border. August blooming; highly wilt-resistant. **Pkt. 25c; 2 Pkts. 45c.**

PETUNIA COMANCHE (Hybrid)

All-America Bronze Medal

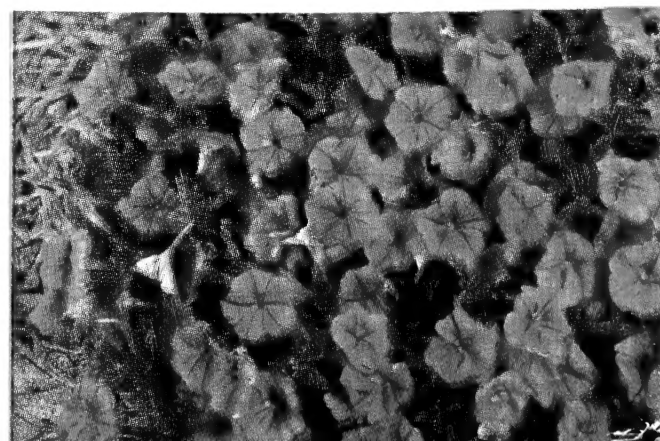

A remarkable new color in Petunias. It is the reddest of red Petunias. It is a vigorous grower and a grand bedder and stands erect. It grows about 15 inches high and spreads 18 inches at the base. Holds its beautiful red color almost under any condition. Flowers are single, 2½ to 2¾ inches in diameter and borne in great profusion from early summer until frost. It is ideal for borders, beds, pots and window boxes. Comanche is really beautiful. **Pkt. 50c; 2 Pkts. 90c.**

ZINNIA BLAZE

The Flower of the Year 1954

Newest, most vivid of the Giant Hybrid Zinnias—Outstanding for the uniform doubleness of its fluffy gracefully quilled petals which reach 5¼ inches across. Blaze bursts into bloom with a profusion of brilliant mandarin-red flowers which soften to scarlet-orange as the flowers attain size. This fiery beauty is borne on free blooming, uniform plants 28 to 32 inches tall. Blaze will delight you as a cut flower as well as for sensational mass displays. The American winner for 1954. **Pkt. (50 Seeds) 35c.**

S. N. & S. Co's. PEERLESS GLADIOLUS BULBS

All Postpaid — Mammoth Flower Spikes — Glorious Array of Colors — All Postpaid

S. N. & S. Co's. Peerless Gladiolus Bulbs are admired wherever beautiful flowers are grown. They make attractive displays in the garden, planted in beds, groups or borders. If spikes are cut when the bottom flowers show color the buds will open clear to the top. They make wonderful house decorations. Gladiolus are easily grown in any good, well drained soil.

Plant the Bulbs eight inches apart and four inches deep. Our Bulbs are clean, free from Thrip and are No. 1 Extra Large Bulbs.

Our Peerless Gladiolus

CULTURE — The Gladiolus thrives in a sunny location. Grows in any good garden soil, but does much better when the latter has been enriched with a fertilizer like Vigoro or Sheep Manure. If the bulbs are planted from mid-April on the blooming period will extend until frost. A trench should be dug five inches deep and an inch of sand placed in the bottom to absorb surplus moisture. Set the bulbs eight inches apart and four inches deep.

Before the ground freezes lift the bulbs. After the tops dry, they should be cut off, the bulbs separated and the small side-growth or bulblets removed. The latter may be handled like the big bulbs. Then the bulbs are placed in paper or cloth bags, sawdust or sand to prevent them from becoming too dry. Keep bulbs in a temperature of about 35 degrees to prevent sprouting.

How to Grow Pole Beans

Pole Beans should not be planted until all danger of frost is passed and the soil is warm and moderately dry. They do best if the vines are given support, the most frequently used being rough poles, spaced 3 to 4 ft. apart each way. Place 5 or 6 beans around each pole, cover with 2 in. of soil, and firm to assist germination. When plants are well started, thin so that 3 or 4 of the strongest remain to a pole. A packet of seed is enough for 15 poles, except Scarlet Runner, a packet of which is enough for 8 poles. Pole Beans may also be planted 3 to 5 in. apart along a trellis or fence.

How to Grow Bush Lima Beans

Bush Lima Beans succeed well in almost any good garden soil but do best in a rich, well-drained, sandy loam. As seed is sensitive to cold and wet ground, it must not be planted until the soil has become quite warm and fairly dry. Plant the seeds edgewise, eye down, 4 in. apart in rows 2½ to 3 ft. apart, and cover with 2 in. of fine soil. When the plants are well started, thin to stand 12 in. apart for large-seeded varieties and 8 to 12 in. for small-seeded varieties. Give frequent and shallow cultivation until blossoms appear, but do not cultivate or handle plants when they are wet. They may be eaten green, dried, canned or quickly frozen.

LETTUCE

THE FINEST OF HEALTH FOOD

($\frac{1}{4}$ -ounce to 100 feet of drill—3 pounds to the acre)

CULTURE—For the earliest Lettuce sow seed of the loose leaved varieties. Sow thinly and when the young seedlings are large enough for the table they may be thinned as used. In this way space is provided for normal growth. For succession sow every two weeks.

To grow Head Lettuce, rich soil, plenty of moisture, and steady growth until the heads are ready to use. A check in growth from lack of nourishment or moisture usually means no heads. Seed may be sown in boxes indoors or in the hotbed and set out as soon as favorable. Cover seed from $\frac{1}{4}$ to $\frac{1}{2}$ inch deep. The plants should be thinned to 10 inches apart in the row, a light application of fertilizer such as nitrate of soda used after the plants have made some growth will be found beneficial. All our varieties of Lettuce are excellent for the home garden.

S. N. & S. CO'S. PEERLESS ONION SEED

(One ounce for 100 feet of drill; 4 to 5 pounds in drills per acre)

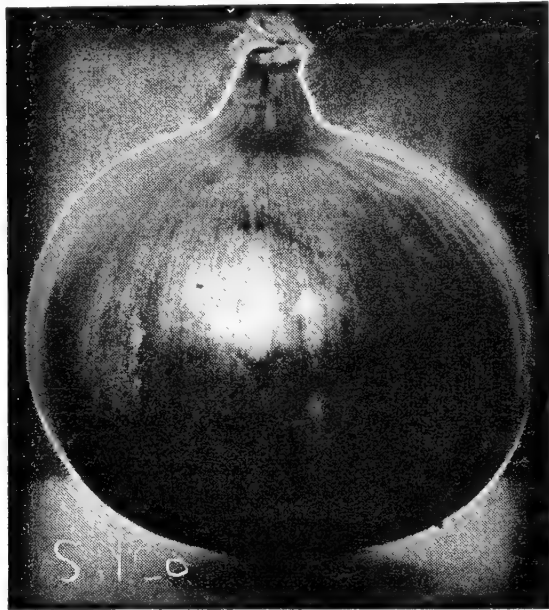

HOW TO GROW ONIONS FROM SEED

Sow seed as early in the spring as the ground can be worked, in rows 1 to 1½ feet apart. Cover the seed lightly. The soil best suited to grow onions is one that is reasonably fertile, well drained, and well prepared. If fully matured onions are wanted, thin the seedlings when 3 to 4 inches tall, to stand sufficiently far apart to develop without touching one another. The largest onions are produced by sowing the seed in hotbed early in January or February and transplanting seedlings to the open ground 6 inches apart. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. Store in a dry, free-from-frost place over winter.

S. N. & S. Co's. TENDER GREEN PEAS

"THEY MELT IN YOUR MOUTH"

(1 pound to 100 feet of drill—80 to 100 pounds to the acre)

Peas are quite hardy and for early crop sow as soon as the ground can be worked. Then sow them in succession every two weeks until the first of August. They require moderately rich soil but not excessively rich or wet, or they will run too much to vine and will not bear heavily. The dwarf varieties can be planted in rows 12 to 18 inches apart, and the tall varieties 3 feet apart. The tall varieties should be staked by brush or tied up. By using the various classes of Peas and making several sowings of each, good Peas can be had for a long season. The pods should be kept picked; the plants will then continue to bear longer. For late sowing, use Early Dwarf varieties.

Do You Know This Secret . . .

Do you know how to avoid the usual disappointment of a poor Pea crop after mid-July? It is easy to get a big crop of juicy Peas even up to late August. Instead of planting at two- or three-week intervals get the following varieties and plant all at the same time in early Spring. This will allow a good root system to develop before hot weather comes. The varieties will bear in the order shown to late August.

S. N. & S. CO'S. PEERLESS RADISHES

(1 oz. will sow 100 feet of drill—8 to 10 lbs. per acre)

Radishes require light, rich and mellow soil to insure quick growth. If permitted to grow slowly, they become tough and pithy. Frequent planting will insure a constant supply. Summer varieties can be sown all Spring and well into Summer. Winter varieties, however, require some time to mature; plant in June or July. Be sure to sow Radishes at 10-day intervals from early Spring to have a regular supply for your table. To enable you to do so we recommend the following: Extra Early Saxa, French Breakfast and White Icicle.

Earliest Spring Varieties

DON'T BLAME FLEAS, MANGE or DIET!

If your dog itches, scratches continually, it's probably not due to fleas, mange or diet. Two to one, it's FUNGITCH, grass-borne fungus infection long a puzzle to science. FUNGITCH starts as an itch followed by dandruff-like scales or sores with brownish edges and mouldy odor — or infection in ears, in paws, under body, tail or eyes. Now a noted specialist's discovery — SULFADENE — applied externally stops itching in minutes... clears up scales and sores in a few days. Generous treatment. 4-oz bottle \$1.00. By Mail \$1.23.

The New ACP SOIL CONDITIONER

PLUS Plant Hormones - Fertilizer - Essential Mineral Elements

A REMARKABLE NEW SOIL CONDITIONER. "USE AS A DUST OR SPRAY."

ACP Soil Conditioner contains the two most effective soil stabilizing elements—PAC (modified polyacrylonitrile) and VAMA (vinyl Acetate Maleic Polymer) with essential mineral elements, hormones and fertilizer added. Can be used as dust or spray and can be applied with watering can. A double purpose soil conditioner. ACP Soil Conditioner turns hard clay or similar problem soils into easily cultivated earth. It increases the water holding capacity of soil. It improves yields and general appearance of Flower, Vegetables and Lawns. It makes soil easier to work. It prevents packing of the soil. Aerated and moisture retaining lasts indefinitely.

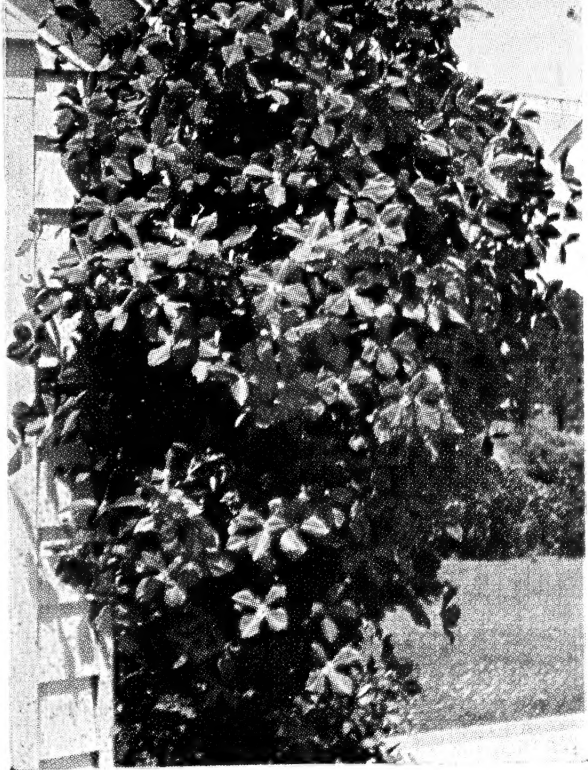

ACP SOIL CONDITIONER is a combination of the most effective soil stabilizers with trace elements and plant hormones added. The powder can be added directly to the soil, or can be added to water and then sprinkled on the soil. Properly applied, it turns hard clay and similar problem soils into loose, easily cultivated soil. The improved structure discourages packing, crusting and cracking after heavy rains. Water penetration and absorption is increased, and there is better aeration for root growth. ACP SOIL CONDITIONER is not a fertilizer, but it makes fertilizers and nutrients more readily available to plant roots, thus stimulating and increasing growth.

Increase Infiltration of Water—Increase Workability of Soil—Increase Aeration, Enabling Earlier Planting—Increase the Efficiency of Plant Nutrients—Increase Seed Emergence—Increase Ease in Weeding—Increase Root Formation—Increase Growth of Flowers and Vegetables.

ACP Soil Conditioner is licensed under the Monsanto Soil Conditioner Patents the only time-tested and patented soil conditioner on the market today.
